

Complex Multimodal Parsing Test

This document is designed to test the RAG engine's ability to parse complex tables that contain nested elements, varying row heights, colspans, rowspans, and embedded images. The table below represents a mock technical specification.

Component Name	Visual / Diagram	Technical Specifications	Notes (Colspan)
Header Rowspan			
Component A High efficiency processor		Specs: - 4 Cores - 8 Threads Optimal performance under load. Tested at 95C.	
Component B	NO IMAGE	Very complex text flow inside a table cell that wraps around and provides a lot of details about the thermal dynamics of the system.	Needs cooling
Summary	Total Units: 2		End of Table
